

The image shows a close-up of a concrete wall with numerous small, circular holes. Light is passing through these holes, creating a pattern of bright, glowing spots against the dark background of the concrete. The lighting is warm and golden, suggesting an indoor or nighttime setting. The concrete surface has a rough, textured appearance.

LUMIKRETE™

LIGHT TRANSMITTING CONCRETE

Translucent Concrete (also known as Light Transmitting Concrete) is a concrete based building material with light transmissive properties due to embedded light optical elements

What is LUMIKRETE™?

Light Transmitting Concrete

Optical Fiber Embedded

Beautiful & Creative Designs Available

Design your space

Be Creative, Original, and Innovative!

Concrete that lets light pass, using optical fibers, has been around for a few years. Design your creative space by consulting us with ways to create a unique space just for YOU!

Thank You
